DENTAL ORAL SURGERY AND ANÆSTHESIA

EXAMINER: DR. J. H. JOHNSON
ASSOCIATE: DR. R. E. DIPROSE

If a Candidate writes his name, or an improper number, on his paper it will not be examined and he will have to rewrite it at a supplemental expense.

1. Describe the surgical procedure indicated for the removal of the apical portion of a lower first bicuspid that is hypercementosed and in close relationship to the mental foramen.

2. State the radiographic evidence that would indicate to you that the root of a lower third molar may be involved with the mandibular nerve.

3. Discuss the role of the antibiotics in dentistry, indicating the agents of choice, and describe dosage and method of administration.

4. Discuss Tic Doloureux from the standpoint of symptoms and treatment.

5. What is the correct procedure to follow when the root of an upper tooth is accidentally displaced into the maxillary sinus?

6. Describe in detail the anatomical structure involved in making a tuberosity (zygomatic) injection. Indicate the correct procedure for making this injection and describe the complications that may arise.

7. (a) What emergency measures should be taken if a patient accidentally passed into the fourth stage of nitrous oxide-oxygen anæsthesia, with the teeth clenched together, the masseter muscles in extreme spasm and the air-way blocked by the tongue?

   (b) What emergency agents or equipment should be available in a dental office where general anæsthetics are being administered?

OPERATIVE DENTISTRY

EXAMINER: DR. H. R. MacLEAN
ASSOCIATE: DR. M. A. McINTYRE

If a Candidate writes his name, or an improper number, on his paper it will not be examined and he will have to rewrite it at a supplemental expense.

1. Name and describe an example of an oral manifestation of a systemic disease.
2. In the manipulation of amalgam in a Class II restoration, what is the purpose of the (a) matrix band?
   (b) adequate condensation of material?
3. In restorations involving the mesial, occlusal and distal surfaces of the bicuspids (a) when should the cusps be restored?
   (b) what would be your material of choice?
4. What are the limitations governing decisions to perform an endodontic operation?
5. (a) What are the consequences of over-retention of the primary teeth?
   (b) What signs and symptoms would influence your decision on over-retention of the primary teeth?
6. Give five reasons for rœntgenographic examination in the case of a fractured incisor.
7. What are the disadvantages of the acrylics used as operative restorations?
8. In the orthodontic aspect, what would be the advantage of serial models taken between ages of 3 to 8 years.

PRACTICE MANAGEMENT

EXAMINER: KENNETH M. JOHNSON, D.D.S.
ASSOCIATE: M. H. GARVIN, D.D.S.

If a Candidate writes his name, or an improper number, on his paper it will not be examined and he will have to rewrite it at a supplemental expense.

Marks	Questions
16	1. Define, as related to the practice of Dentistry: (a) Professional ethics. (b) Contract. (c) Malpractice. (d) "Ordinary skill and knowledge."
10	2. List the reasons why complete records are essential to the successful dental practice.
20	3. Give a list of stationery forms, books, etc., you will require for a complete set of records in your practice.
14	4. You have decided to establish a "recall system" in your practice: (a) What advantages accrue to the patient and to the dentist in so doing? (b) What system of records would you require to take care of such a list?
15	5. What are a dentist's obligations in regard to: (a) Information of a personal nature which may be learned of or from a patient in the practice of dentistry? (b) Enlarging the knowledge and skill of his science and art? (c) Patients referred by a fellow practitioner for consultation or emergency treatment?
10	6. What printed forms and notices are considered "ethical" by the Canadian Dental Association in establishing and carrying on dental practice?
15	7. A hypodermic needle is broken while a dentist is making a mandibular "block" injection for anæsthesia. The dentist is unable to locate and remove the fragment. What action should be taken?

PROSTHETIC DENTISTRY AND CROWN AND BRIDGE

EXAMINER: DR. J. STANLEY BAGNALL
ASSOCIATE: DR. G. M. DEWIS

If a Candidate writes his name, or an improper number, on his paper it will not be examined and he will have to rewrite it at a supplemental expense.

1. Discuss the role of the articulator in the construction of dentures which will give good physiological results.

2. What examination would you carry out in a mouth where full upper and lower dentures are requested in: (1) The patient is completely edentulous. (2) The patient has 6 - 10 lower anterior teeth, and the maxilla is edentulous?

3. What procedure should be taken at the "Try-in" and "Insertion of Dentures" stages in order to obtain the best possible esthetic and functional results for the dentures?

4. What would you recommend in the following cases: (1) A patient with a full upper denture requests you to make a lower denture. (2) You have recently inserted full upper and lower dentures. The patient returns with the complaint that his speech is seriously affected?

5. Give your method for taking a partial lower impression where only the eight anterior natural teeth are present. Explain why you believe your method would give the desired results.

6. (1) What is the function of clasps on partial dentures?
   (2) Contrast the indications for wrought clasps and cast clasps.

7. Describe your plan for the restoration of a missing first bicuspid, in an adult, by a fixed bridge. Reasons for the type of design chosen are to be given.

8. In what types of cases do you consider that: (1) A removable partial denture is the preferred type of restoration. (2) A fixed bridge is the preferred method. (3) The choice lies between a removable or fixed restoration, with an indication of the factors you would take into consideration in deciding which type to recommend.
